AB - J08048058 The printer appts. consists of a printing unit which prints,  
when a CPU of a printer controller directs a start of a first feed  
data (S32). The printer controller controls each part of the printer.  
An user's specification of a laser beam printer as a printing unit is  
judged (S33).  
- The print temperature of a fixing roller is also judged (S34).  
If the laser beam printer is in printable state the printing is  
started, if not the printing is done by ink jet printer (S35). A  
switching unit changes the printing unit.  
- ADVANTAGE - Enables printing by auxiliary print appts in case of any  
trouble in main print appts.
